Advantages of our technology:

- All the elements are customisable and easily integrated to replicate the layouts you are used to or even to improve the documents quality
- Illustrations can be raster images or vector based and be integrated, indexed, conformed and utilised without a problem
- Parts are managed according to the partlist and dynamic links are created in native pdf without the use of any strange script which makes our documents compatible even with older terminals.
- The index in our documents it is automated as well as the list of parts and dinamically linked to the source page as for the numerica nad alphabetical representation of the parts list are completely automated, you wont miss a partnumber.
- Figures are managed as collection of illustration in a way that make the documents easily editables and fastly previewed ergo promptly ready for production.
- List of revision is automatically generated and makes all the calculations for you as soon as it is generated.
- You stay incontrol, always: you can chenge chapter order appearance, migrate whole chapters to others ATA sections, integrate and merge different manual in one at will, just specifying the order of preference and prevalence. But you will still be in full control of which part/paragraph/illustration should beintegrated from which source document.
- The list could be fairly longer but if you want to know more, you are wellcome to contact us.

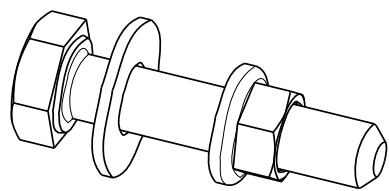

* The illustration below is courtesy of Biagio Buonomo.
